

New Year's Resolution

In 2018, Realization of Expression

The character X of our corporate name stands for eXpress. We express our new business forms and establish them in 2018. FSX Products starts the shipping of REION, long-awaited our flag-ship product. REION aims to be an industrial platform available in several markets. Not only for the current market of Oshibori, but also for the other industries and business scenes we would like to approach. The main theme of FSX Commerce is convenient and eye-catching online-shopping. FSX Commerce also challenges cross-border EC. Motif of FSX Franchise is a contribution to the industry beyond self-benefit. FSX Franchise promises more business benefits towards the members in two ways. One is to provide business tools to reduce employee hiring issues coming from the aging population. The other one is to provide value-add products. The new business FSX Science will achieve academic goals along with additional values into Oshibori that requires sanitary management and quality management. These new efforts will be announced early this year. Lastly FSX Data & Communication will also announce its new service. This will consist of new technologies, monitoring Oshibori industry and up to date communication.

All these businesses are expected to contribute our original business foundation FSX Oshibori. We would like to demonstrate our style of business as we grow as a company and as individual departments.

In order to meet stake holder's expectations, to have a close association with our business partners and to revalue the customer, in 2018 we shall increase our business values in the appropriate balance of service and product, digital and analog, and people and business.

This is the start of our 51st year. I, along with all the staffs, would like to devote myself to make this year very wonderful and exciting.
